Running Opera 10 and downloaded Sudoku-puzzle file from here. ... Works very well. First load shows me my existing 9x9 game, then I was asked to log in if I wanted to play with a new unique game. Logged in, and was presented with a 9x9 grid with all numbers from 0-8. 0 was now blank, so chose 2-8. Then I pressed a. The grid remained blank. So it did what it was supposed to do, move me through 9 levels of Sudoku. I clicked b. The grid was now back to normal, with 2 numbers in it, numbers 2 and 3. But when I pressed c, the grid was now like before, except for numbers 2 and 3. c only lets me choose a number. If I try to press the back button, it just cancels the whole game. There's no back movement. Then I

tried to print the Sudoku-puzzle. It came out well with 4 b7e8fdf5c8
