Although the presence of metastatic disease at diagnosis of primary melanoma is generally regarded as a poor prognostic indicator, in many studies no significant difference has been observed between patients with and without detectable metastatic disease. We reviewed the records of 953 patients who underwent wide local excision of primary melanoma at the University of Utah between January 1, 1971 and May 31, 1990. The incidence of metastases detected at the time of diagnosis of primary melanoma was 2.2%. The median Breslow thickness was 2.0 mm for patients with a primary melanoma with metastases at diagnosis compared with 1.0 mm for those without metastases (P less than 0.0001). Multivariate analysis showed that thickness and ulceration of the primary lesion were the only significant factors related to the presence of metastases at diagnosis (P = 0.0020 and 0.0048, respectively). The presence of sentinel lymph node metastases was also associated with a greater incidence of metastases at the time of diagnosis of primary melanoma. Patients with sentinel lymph node metastases were 2.6 times more likely to have metastatic disease detected (P = 0.0034). Other factors such as gender, age, histologic type, Clark level, and mitotic rate did not show significant association with the presence of metastases at the time of diagnosis. The occurrence of metastatic disease at the time of diagnosis of primary melanoma is associated with a greater likelihood of thicker and more deeply invasive melanomas. Patients with sentinel lymph node metastases were more likely to have metastatic disease detected. However, when compared with patients with sentinel lymph node metastases, patients with metastases at diagnosis were no more likely to develop metastases elsewhere and had a longer median time to distant metastases. These findings suggest that the presence of metastatic disease at the time of diagnosis of primary melanoma is not a reliable predictor of the course of the disease.Q: Why is there no preprocessor conditionals or directives for declaring an inline variable? Thus, there was not a clear abuse of discretion in denying the motion for mistrial. 9. Briefs and exhibits admitted into evidence at the trial court's discretion may be included in an appellate record. See Tex. R. App. P. 53.1, 53.3. The record filed with this court contains only Parks's notice of appeal. Thus, we may not consider his appellate brief or exhibit. Further, we may not consider Parks's reply brief, as it was filed in violation of the Texas Rules of Appellate Procedure. See id. 53.1, 53.3. 10. We note that Parks had previously filed a motion for a new trial that included a request that the trial court issue findings of fact and conclusions of law. See Tex. R. Civ. P. 297. In that motion, Parks stated that the "court's failure to make findings of fact and conclusions of law has deprived [him] of the opportunity to properly brief and argue his case to this Court." The trial court denied Parks's motion. In doing so, the trial court found that Parks's counsel had "carefully reviewed the court file" and that there was "no justification for an order or statement of fact by the court." No findings of fact or conclusions of law were issued. 11. In his brief, Parks argues that the trial court erred in excluding Parks's counsel's testimony that, in his opinion, there was insufficient evidence to support the verdict. A review of Parks's counsel's statements reveals that he did not attempt to testify as to the weight or value of the evidence to which he was referring. Rather, Parks's counsel said, "I don't think there was sufficient evidence to support the verdict, if you recall, Your Honor." Thus, we need not address Parks's argument. 12. In his reply brief, Parks also cites to this court's opinion in *Hudson v. Gould*, 711

You can even import and incorporate changes while you work, such as when you import files from mobile devices. Edit and work on editable PDF files directly in AutoCAD. Print, edit, and review the results right away. Multi-page PDFs can now be automatically split into separate files, allowing you to edit the PDF pages individually and manage changes easily. Now you can print, edit, and review PDF files on paper. Markup the PDF, then add it back to the drawing directly. There's now an option to print the drawing contents in PDF (instead of printing the whole PDF) and then incorporate any edits from the PDF. You can use the "Add as Cut Lines" feature to add internal cuts to drawings. You can now work on a single part of a model from an external network or cloud storage with remote access. Developing a new feature in AutoCAD means carefully analyzing and evaluating the needs of designers, business managers, technical experts, and others who use it. While you work to improve AutoCAD, you also have to work to learn about the people who will be using it. Many people are interested in how their work can improve. In the previous release, we continued to work on bringing users' feedback to life in the form of new features. In AutoCAD 2023, we've continued to evolve the product in order to further improve how users can work faster and more efficiently. Workflow Optimizations "Automation" and "Simplification" are among the most frequently asked for topics. We've added a "Perform Complex Tasks" feature that helps you perform several tasks at once, making it easier to complete your work. An example of the "Perform Complex Tasks" function is when you need to combine two drawings to combine them into a single file. The first step is to copy one of the existing drawings and paste it into the workspace. Then, perform the actions required to merge the two drawings. You can repeat the same steps on as many files as you want, by repeating the step. If you need to duplicate a task, you can repeat it more than once. Another feature that speeds up workflow is the "Add to List" function, which makes it easy to organize your lists, especially when your list contains many
