/PDFÄ / rapidex speaking course. pdf DownloadToday, the Wall Street Journal reports that Microsoft is putting into place measures to make it more difficult for pirates to share its software and other copyrighted material. The measures are a part of its annual "War Against Piracy" program, which also includes releasing the source code of Microsoft Office. The War Against Piracy program began in 2013, with the announcement of Microsoft's anti-piracy efforts with the Electronic Frontier Foundation. The goal is to encourage people to pay for Windows 8 and Office upgrades with offers like \$500 cashbacks, discounts of \$200 to \$500, etc. Microsoft's anti-piracy efforts have also included a campaign on Pastebin to make the codes more readily available for sharing. Over the next month or so, the WSJ reports, Microsoft will start offering the open-source developer community "a new set of tools" to make the source code of its products more available. The names of the tools aren't being disclosed at the moment, but the WSJ says that these tools "are designed to help developers make their creations more widely available and easier for others to use." This is all part of a bigger game for Microsoft, as the company wants to build a "war chest" against any attempts at copyright infringement that it might not have been able to defend against in court. These efforts could potentially be heading to the government's doorstep. Recently, the US Senate unanimously passed the Stop Online Piracy Act and Protect IP Act, measures that would have required ISPs to filter their customers' internet traffic for the purposes of blocking copyrighted material. This is just the latest step of Microsoft's war on piracy. In 2013, it began offering a \$500 cashback to individuals who visited the Microsoft Store website and bought a copy of Windows 8.1. The offer was for PCs only. The company's primary focus, at the moment, is the Windows 8.1 upgrade. However, the end goal is to have a product that allows users to buy Windows with a U.S. credit card through the Microsoft Store. Microsoft's biggest hurdle is convincing customers to switch to the U.S. version of Windows in the face of a cheaper, more popular product from rival Apple. The operating system is also getting cheaper, as the company offers it to students and people using free Microsoft Surface tablets as part of a student program. While it has become the standard on tablets, Windows 8 is far from the most
