The year 2015 proved to be a good one for Adobe as the company released a slew of products including Photoshop and Lightroom. So, how did Adobe fare in their annual product update, regardless of all the hype, with Lightroom, and specifically with Lightroom 5? Adobe Photoshop Lightroom 5 and Photoshop CS6 received the most love with many new features introducing a range of new features. The biggest enhancement to Lightroom 5 is the fact that is now a standalone application. Even though, now that it is a standalone application, it retains its plug-in connection to Bridge. This allows users to continue using Lightroom 5 normally while working with a compatible Connection Cloud.

Like adding a background too small for the real image, one of the problems with removing items from a photo is shrinking the subject. It's also unreliable to try and get rid of an unwanted item from your photograph. Photoshop makes it easier by using a content-aware fill feature. However, you have to make sure the entire item is in the exact same location, and doesn't have an unexpected shadow cast to it. If not, the content-aware fill feature will try and'fill blank space with the same color of the object. In this Adobe Photoshop tutorial, you'll se how to add nudes in Photoshop with just a few clicks. You can use Photoshop Lightroom to jazz up or retouch a photograph in a cozy creative environment. Adjustment layers let you to apply your own color or tone adjustments to a photo. To make an Adjustment Layer, simply drag the adjustment slider into the layer. Shrink can be a problem if you are trying to remove objects from a photo. An easy way to remove an unwanted object from a shot may be to trace the object you want removed from the photo. You can use the pen tool to trace the outline of the object. Once you have traced out the outline, you can remove the object, and then the rest of the unwanted section can be removed like any other unwanted section. Photoshop Image Adjustment is like a built-in photo editing tool that can make your photo look better than ever. Using Photoshop Adjustment Layers will take your photo way beyond the colors and brightness. Adjustment layers contain settings that are applied to an existing layer. To make an adjustment layer, click the Adjustment Layer icon on the bottom left-hand side of the Layers Panel. This creates a new layer called the adjustment layer.
