As usual, the Apple iPad Pro and Apple Pencil have been tested on the latest versions of the OS, and the results are each below. The iPad Pro as reviewed here is an iPhone 6s Plus and the Pencil is a Power User model, with the magnetic nib and an extra speed setting in the Power Button area (C named) above the buttons. As mentioned earlier, Apple has seen fit to make it so that users can now select the Pencil Mode for use with the Pro apps. I expect most will use that anyway, but I wasn't able to get it working with Photoshop or Sketch at present, and my reading on the forums indicated that not everyone was able to select it either. In addition to nine new brushes, the new Adobe Brush Stroke Designer lets you create new textures, and you can even retouch existing ones. If you cherish brushes, design new presets for a new brush size or set up your own custom brush color or style. The new Adobe Digitize tool lets you create guidelines for repetitive images and forms. Adobe took a lot of feedback from early beta testers about these issues and changed the app. Now, it's ready for future releases like Cloud options, easier access to brushes for images, and live preview. **Adobe is rolling out this new app worldwide now.** It's available now on iPhone and iPad, and awaits your model number, so if you own the original iPhone 4S or earlier, you can get it now. So now, after having enjoyed the stability provided for users by the next future release of Photoshop, what about Photoshop's new features in Lightroom 5? Adobe's goal for Lightroom 5 was to provide support for web and mobile editing. It may not sound too exciting, but it is actually a very big deal. If you work with digital photography or videos often on the web, then this feature alone should make you get excited. As most users know, Lightroom 5 can connect to your **YouTube** account and edit your videos directly on the back-end of your image library, while you have direct access to all your photos on the back-end. You can't compare that with a feature offered by **GIMP**, a **C ++** application and **Pixart AI** plugin respectively.
