Simply because the design is small and minimal, putting so much emphasis on features and functions shouldn't detract from the overall experience. The res familiar interface is clear; the learning curve is minimal; the help is superb; and, of course, features such as the red, green and blue channels and the painting tools remain top-notch. To the Photoshop, I say ... You Can't Put A Price On This. You take a piece of art or design and shape it for the web, and you do it in any combination of layers. You can put tools, effects, frames, and text in separate layers and recombine them as you please. You can even combine text with line art to create awesome collages. For the price, you can't do better than the Adobe Creative Cloud. Better than Illustrator because it's minimal. It has the same powerful features as Photoshop, but with a desktop-inspired, or tablet-inspired layout. The only thing that's missing is apps to use them in. I use the Adobe suite, specifically Lightroom and Photoshop almost daily. I use Adobe Presenter the rest of the time. Both programs are based on the same code and can read and write each other's export file format. I can quickly flip through photos on my mobile phone with Lightroom and then easily produce images for Facebook in Presenter. Play around with them, get them installed on your laptop or desktop, and you can work like a pro. Lightroom is a very powerful photo editing tool for creation or image organization. It allows you to adjust colors, density, and brightness, straighten, remove red eye, change lighting, and more. It can export images as a series of slides, PDF, JPEG, XML, etc.
